

THE FEATURE SNAPSHOT FOR 20.3

The product release provides features that directly impact requisitioners, approvers, administrators, and other system users. These features are listed in summary form in the Feature Snapshot below.

SNAPSHOT KEY

There are seven columns in the **Feature Snapshot**. Each of these is explained below:

- **Feature Name** –The feature title matches the heading found in the Preview Release Notes (this document). For more information on the feature, locate the feature via the table of contents. The features are listed in the order presented in the document.
- **Related Solutions** – The solution or solutions associated with the enhancement. Use this information to determine if the change impacts your organization. For example, if the change is for Contracts+, only those organizations using this product will be affected by the change.
- **Impacted Users**– The user role or roles PRIMARILY affected by the enhancement. For example, if a change is made to the way that a shopper selects a supplier, end user would be listed in this column. For more details, please refer to the feature description.
- **Integration Impact** – Indicates if the feature may have impact on integration between JAGGAER Indirect and other third-party systems used by your organization. Examples would be changes to import or export files or features developed expressly for integration. We recommend that administrators review all of these features to determine if there is any integration impact.
- **On by Default** – Indicates that the feature is turned on (enabled) by default and no configuration is required to take advantage of the new functionality.
- **Requires Setup** – Indicates that some type of setup or configuration is required. In most cases, this is simply enabling one or more configuration options and enabling permissions for the appropriate users.
- **Contact JAGGAER**– Indicates that someone at JAGGAER (Customer Support, Customer Success Manager, or Sales) must be involved in order to enable and take advantage of the feature. A new license may be required, workflow changes, etc.
